This is the only spreadsheet from UC that has the data on bilateral pleural change (total of 30 individuals). The Pleural column includes both discrete and diffuse (total of 80 individuals). None of those listed with bilateral pleural change also list diffuse pleural. Can I conclude that the 30 with bilateral pleural change have only discrete pleural change?

I also need to know whether #17289, #18733, #19982 had bilateral discrete pleural change in 1980. Eric confirmed that #16920 had bilateral discrete in 1980. #17289 and #18733 had bilateral discrete in 2004.

All,

Attached are the deliverables for the exposure reconstruction project.

Please note there are 6 tabs in the Excel file.

My understanding is that any comments/questions from Bob and Leslie will be made by Friday, August 13. We will then have until Friday, August 18 for any updates.

Thanks,

Tim Hilbert
